Comments

Ankit integrated IndusInd and BFL bank for deposits. He was integrating the Bajaj Bank under my guidance but took full ownership and lead while integrating the indus bank service. He led the technical discussions with IndusInd team and Once all blockers were resolved by the Indus team, Ankit finished integration in less than a week time. His ownership and attitude to get things done is really appreciable.

Strengths:
1. onwership and right attitude to get things done.
2. Get to the core of technical concepts for example how queues, sideline queues, concurrenly, idempotent APIs work and then implement them.

Opportunities:
1. Build on few technical skills such as Linux commands, OS concepts etc.

2) Impact of work on Groww

Comments

Ankit has great potential and he digs deeper into the technical concepts being used in the solutions before implementation. He takes full ownership to get things done and he shall continue to build on that. At times, he shared smart inputs to optimize the solutions such as address matching.
Going forward, He shall build on few skills such as linux commands and OS concepts and become fully independent for all his deliverables.
